Solving the Automatic Dispenser Failure Frustration

Today's technology provides some easy solutions to controlling paper towel costs, as well as enhancing a restroom experience.

Did you know that **nine out of 10 people prefer an automatic or touch-free towel dispenser?**

That's a smart choice, as a study conducted by Dr. Charles Gerba, also known as "Dr. Germ" found that **paper towel dispensers have over 50 times more bacteria on their surfaces than a typical public restroom toilet seat.**

But not everyone is thrilled with automatic dispensers that don't recognize your hand motion or experience battery failure.

It can lead to frustration with ineffective hand waving, searching for additional dispensers, or exercising the dreaded toilet paper last option.

One towel dispenser we stock is **the best of both touch-free and manual worlds!**

The Wausau OptiSERV hybrid is a unique dual-functioning dispensing system. It provides users the option of either using the hands-free function or manually dispensing a pre-set 11" towel length.

The manual option can be either pulling on the exposed towel or pressing the feed bar.

Additionally, it holds up to 1,000 feet of towel and features end-of-roll transfer system which eliminates stub roll waste. A variety of 100% recycled Green Seal certified towels are available in lengths of 425, 600, 800 and 1,000 feet.
